Additional DEC Protection of Carpenter Falls Area

10,240" of Hemlocks
treated by NYS DEC at Carpenters
~650-850 trees
*assuming average of
12- 15" diameter trees*

The 37-acre **Carpenter Falls Unique Area** is a popular destination. Known primarily for its waterfall, the property also features dense hemlock cover and the steep gorge area of Bear Swamp Creek. The creek feeds into Skaneateles Lake, the drinking water source for the city of Syracuse and surrounding towns, making the area a high priority for HWA treatment. Closely following the Pesticide Application Plan, staff applied pesticide treatment to 4-5 acres of property, on up to **10,240 total diameter inches of hemlock trees**

The healthiest and most ecologically important hemlocks were selected for treatment in the new boardwalk and viewing areas first, then selection continued east down the gorge area until the treatment limit was reached. Staff identified for treatment, tagged, and measured hemlocks before spraying the base of tagged trees with imidacloprid, which will protect those hemlocks from HWA for up to seven years. An injection method was used for trees closest to Bear Swamp Creek. After the first year, treated trees will be checked to determine the success of the treatments. HWA survey efforts will continue and expand to nearby areas over the next few years.

*"If we lose the Hemlocks,
we lose the lake" - Dr. Robert Werner*

Banks as additional priority areas

*"If we lose the Hemlocks,
we lose the lake" - Dr. Robert Werner*
